In the book, by first presenting an answer to the opening, then in each chapter we will start with a to address some main lines. In the later chapters, we will extend the discussion to a longer line, including the critical. In this book, we will analyse in depth the most important lines with the main ideas that can be found in a systematic study of the subject. A systematic and well-balanced study of the opening with 1.e4 e5 is a very important part of the chess literature. Until very recently, it was nearly impossible to get hold of the most important lines in a tournament, because in many lines it was sufficient to play an opening move and then defend from the opponent. In recent years, the need for a book of the Spanish became much more obvious. It was impossible to find a book in English that would cover every case that one can be faced with in the opening. The Spanish belongs to a class of openings that need a book of the opening, because they can only be played by a very few grandmasters and juniors. The fact that Black can play various defence is not a problem in this type of openings, as Black can only face a limited number of variations. We will start our study of the opening with 1.e4 e5 in the first chapter with the best reply to the e5-pawn move. We will then start a systematic study of the openings with the main moves in 2.d4 and 2.c4. A great number of very good Black replies will be analysed in the first chapter. Later on, we will study more in depth the most important themes and only deal with a few additional cases, but the main lines are not included in this book. The author has studied many of the main lines in the opening for a long time. The opening is by no means the author's favourite opening and White has the advantage. He always tries to play the game of the position, despite his evaluation. This can be seen in the chess games that he has made between the end of the 1960s and the beginning of the 1990s, where he often achieved success with the Black side.
